

Californians and Their Economic Well-Being—November 2021

Full Crosstabs – Likely Voters Only

Methodology Note:

Findings are based on a survey of 2,292 California adult residents, conducted online using the Ipsos KnowledgePanel. Interviews were conducted in English, Spanish, Chinese (simplified or traditional), Vietnamese, and Korean according to the respondents' preferences. The median time to complete the survey was 16.2 minutes. Interviewing took place from October 12–31, 2021.

These crosstabs are based on a subgroup of 1,543 likely voters. The sampling error, taking design effects from weighting into consideration, is ± 3.9 percent at the 95 percent confidence level for the unweighted sample of 1,543 likely voters. The sampling error for unweighted likely voter subgroups is larger. Sampling error is only one type of error to which surveys are subject. Results may also be affected by factors such as question wording, question order, and survey timing.
